New Plotter Only Has Postscript Driver For Mac

Personal computer can see the plotter, I have insight the right papers dimensions, and when I push print, it will stop and not print out out.. I just upgraded from MacOS to Sierra and today discover there is certainly no method to print! I erased the old driver before I discovered there will be not really one to substitute it.. Will be there another (generic) driver that might function?. Hi, Offers anyone utilized a Horsepower design Plane 4520 plotter? I'm making use of a Mac Professional and a 2011 MacBook Pro 17' and I can't obtain this plotter to work on either.. Obviously, I need to print from my 3600 as that can be my only printing device The 3600 has been a workhorse of a computer printer and I just recently changed two costly toner ink cartridges.. Horsepower Drivers are usually pre-installed for Snowfall Leopard I have not long been able to get this plotter to acknowledge tif, PS or jpg files.
